SCALE FOR PROJECT DATA SCIENCE - (/PROJECTS/DATA-SCIENCE-1)

You should evaluate 1 student in this team

Git repository

`git@vogsphere.42malaga.com:vogsphere/intra-uuid-0c4d40d3-a560--4`

Introduction

- Remain polite, courteous, respectful and constructive throughout the evaluation process. The well-being of the community depends on it.
- Identify with the person (or the group) evaluated the eventual dysfunctions of the work. Take the time to discuss and debate the problems you have identified.
- You must consider that there might be some difference in how your peers might have understood the project's instructions and the scope of its functionalities. Always keep an open mind and grade him/her as honestly as possible. The pedagogy is valid only and only if peer-evaluation is conducted seriously.

Guidelines

- Only grade the work that is in the student or group's GiT repository.
- Double-check that the GiT repository belongs to the student or the group. Ensure that the work is for the relevant project and also check that "git clone" is used in an empty folder.
- Check carefully that no malicious aliases was used to fool you and make you evaluate something other than the content of the official repository.
- To avoid any surprises, carefully check that both the evaluating and the evaluated students have reviewed the possible scripts used to facilitate the grading.
- If the evaluating student has not completed that particular project yet, it is mandatory for this student to read the entire subject prior to starting the defence.
- Use the flags available on this scale to signal an empty repository, non-functioning program, a norm error, cheating etc. In these cases, the grading is over and the final grade is 0 (or -42 in case of cheating). However, with the exception of cheating, you are encouraged to continue to discuss your work (even if you have not finished it) in order to identify any issues that may have caused this failure and avoid repeating the same mistake in the future.
- Remember that for the duration of the defence, no segfault, no other unexpected, premature, uncontrolled or unexpected termination of the program, else the final grade is 0. Use the appropriate flag.
You should never have to edit any file except the configuration file if it exists. If you want to edit a file, take the time to explicit the reasons with the evaluated student and make sure both of you are okay with this.
- You must also verify the absence of memory leaks. Any memory allocated on the heap must

be properly freed before the end of execution.
You are allowed to use any of the different tools available on the computer, such as leaks, valgrind, or e_fence. In case of memory leaks, tick the appropriate flag.

Attachments

-  subject.pdf (<https://cdn.intra.42.fr/pdf/pdf/216858/en.subject.pdf>)
-  data_2023_feb.csv (https://cdn.intra.42.fr/document/document/53481/data_2023_feb.csv)

Mandatory part

Ex00 Show me your DB

Ask to be shown the connection with the DB

Attention if the connection with the DB does not work, the evaluation stops here

Only the tables "data_202*_****" and "items" must be present, you must delete the one that would be in addition

 Yes

 No

Ex01 customers table

Look at the student's code then execute this command in the console:

```
SELECT COUNT(*) FROM customers;
```

You should have as a result : 20692840

 Yes

 No

Ex02 remove duplicates

Look at the student's code

Look at this duplicate has been removed:
event_time event_type product_id
2022-10-01 00:00:30,remove_from_cart,5809103
2022-10-01 00:00:30,remove_from_cart,5809103

Look at this duplicate has been removed:
event_time event_type product_id
2022-10-01 00:00:32,remove_from_cart,5779403
2022-10-01 00:00:33,remove_from_cart,5779403

See if these lines have NOT been deleted:
event_time event_type product_id
2022-10-01 00:04:15,remove_from_cart,5692893
2022-10-01 00:04:15,remove_from_cart,5802443

Execute this command in the console:

```
SELECT COUNT(*) FROM customers;
```

The result should be between 18500000 and 19200000

 Yes

 No

Ex03 fusion

Look at the student's code

Execute this command in the console:

```
SELECT * FROM customers where product_id = 5846774;
```

| product_id | category_id | category_code | brand |
| 5846774 | 1487580010695884800 | accessories.bag | vosev |

All columns must be filled in, there must be no loss of information

Execute this command in the console:

```
SELECT COUNT(*) FROM customers;
```

The result should be between 18500000 and 19200000

The number of lines must not have changed

✓ Yes

✗ No

Ratings

Don't forget to check the flag corresponding to the defense

✓ Ok

★ Outstanding project

Empty work

🚧 Incomplete work

📄 Cheat

💥 Crash

⚠️ Concerr

🚫 Forbidden function

Conclusion

Leave a comment on this evaluation (2048 chars max)

Cyril me enseñó su código y todo funciona

Finish evaluation
